

Problem Solving for Immunization Programs Michael McQuestion

CASA Tutorial: Clinical Assessment Software Application

Download CASA

To download the latest version of CASA, please visit: <http://www.cdc.gov/nip/casa/Default.htm>.

Download the Datasets

Save the dataset files (both the Excel and ASCII versions) onto your computer in a location that you will remember. Preferably, save these files onto a floppy or Zip disk and use them directly from the disk. (Because of the way CASA is programmed, this is the most efficient manner in which to access the datasets.) Datasets are provided together in a zip file.

Complete the Tutorials

The tutorials will walk you through the basic functions of CASA and are part of your assignments. You can either print out the tutorials to reference while going through CASA, or you can view them electronically while toggling back and forth between the tutorial and CASA.

Supplementary Materials

The readings listed below may be helpful in understanding CASA:

Bulim, Igor – CDC National Immunization Program. File Import Specifications to Link Immunization Registries/Patient Management Systems to the Clinic Assessment Software Application (CASA) Version 2.X. July 2001.

Minnesota Department of Health Immunization, Tuberculosis and International Health Section. Using CASA to Do the Chart Review. January 2001.

Assignments

Once you have completed the three tutorials, proceed to the assignment.
