

This assignment builds on Mauro Nunez's presentation on financial statements [1] in general, and income statements [2] in particular. Using OpenOffice [3], create a free open source office suite, a 3 period projection (3 years, 3 months, or other time period of choice) of income and expenses for their project using a spreadsheet. Download it from here [4], and create the income statement spreadsheet from scratch. Also read up on sources of funds [5], as introduced by Teresa Nelson last week.
